

Multinail Multi Tensioner

Pre-punched galvanised steel tension brace designed to brace timber wall frames in domestic construction.

Benefits of the Multi Tensioner

This pre-punched galvanised steel brace is:

- Highly effective in situations where bracing cannot be cut into studs.
- The ideal tension bracing system when used in conjunction with Flat Tension Bracing
- Practical – it reduces on-site labour time since studs do not require notching.
- Made in Australia

Installation

1. Only use larger holes on the Flat Tension Bracing for Multi Tensioner.
2. Secure one Multi Tensioner per Flat Tension Bracing. Tighten until taut.

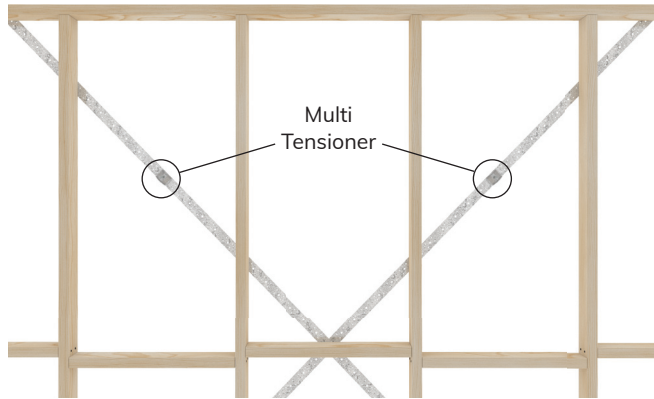

Figure 1: Multi Tensioner

Note:

- Do not over tightening the Flat Tension Bracing, in case of reducing overall bracing wall capacity and causing wall frame out of plumb.
- It is recommended to position the Multi Tensioner facing into the frame for a flush finish prior to the installation of plasterboard.
